## If You Enjoy Pulling String Line and Snapping Chalk Lines Then This Laser isn't for You!

Tue, Jun 21, 2016

*LaserLine Mfg., Inc., has produced a line generating guidance laser for all walk behind paint striping machines. This new innovative tool eliminates the need to pull string line and/or snap chalk lines. Using this new method can increase your productivity up to 50%, plus it's more accurate, and your lines will be straighter than ever.*

LaserLine Mfg., Inc., has produced a line generating guidance laser for all walk behind paint striping machines. This new innovative tool eliminates the need to pull string line and/or snap chalk lines. Using this new method can increase your productivity up to 50%, plus it's more accurate, and your lines will be straighter than ever.

This new method of striping is a game changer not only for parking lot striping, but airports as well. The system generates a line over 500 feet, which allows airports and parking lots to stripe longer, more accurate runs day or night.

How it works: All you need is a start and endpoint. For day-time use, (night-time optional) set an alignment target at your far point up to 500 feet away and set your spray gun directly over your starting point. Once you get the laser-line centered in the target, start striping while heading towards your far point. Note that using a longer reference provides a straighter line, because you are not looking down making constant corrections while trying to follow string or chalk. This also works extremely well with strippers featuring Auto-Layout.

Here is what 3 different striping contractors are saying about this revolutionary method:

**Mark Estrada, Marathon Solutions Group, LLC.**

"My company recently purchased the GL1000 after seeing the demo over at NPE. It looked like a cool product, so we took the chance. And oh man, it has exceeded our expectations. Not only did our productivity increase, but the overall quality of the finished product has been flawless. The GL1000 has made us look at Striping in a whole new way. From New layouts to Re-Stripes it has a use. It also has become an effective learning tool for our new guys...Not to mention, it's really cool when you get customers or other strippers to stop in their tracks just to check out your awesome laser! I could go on and on about this product."

**Dennis Ware, Ware-Ever Pavement Maintenance Co.**

"The GL 1000 is the real deal. If you are a one-person operation, the GL1000 will make those new layouts something to look forward to instead of dreading. No more dragging around weighted buckets to hold the other end of your chalk strings. You can now be as efficient as any traditional multi-person operation. For the larger companies, the GL1000 will definitely save you money and time."

**Frank J. Mele Jr., M&M Asphalt Maintenance**

"All I can say is, wow. It's refreshing to use and own a quality product that actually does what it's supposed to. I only used it for about five hours, but I cannot imagine not having it from this point forward. I've been painting lines for a long time and yesterday I painted some of the straightest lines I ever have, with tremendous ease too. I was also able to correct a 300-car parking lot full of crooked and misaligned parking rows."

Bottom line, this new method is the greatest thing since the ride-on line driver and auto layout. How often can you buy a new machine that will increase your productivity up to 50%? Using this new method will increase your productivity between 30-50% whether you have a new striping machine or one that is ten years old; and whether you are a beginner stripper or an experienced one.
